Letter of Appreciation

Providing enhanced and strict Cyber security is today one of the biggest challenges facing the law enforcement agencies of the country. For this challenge to be met adequately it is necessary that the police officers working at the Police Station level are made aware of the growing menace of cybercrime and the ways and means to combat it. However any large scale initiative to ensure this is largely missing on the national scene.

However, **Mr Varun Kapoor (IGP)** who is the Director of the Police Radio Training School at Indore (MP) recognized this deficiency and took effective steps to counter it. He not only designed and developed short cybercrime courses, using his limited available resources, but has been executing them with great aplomb over a period of 14 months. Till date he has organized 26 state level and 1 national level course and has trained 539 police officers of the rank SI – DySP. Thus he has developed a model that is worth replicating and emulating at other places in the country too.

This sustained drive launched by **Mr Kapoor** is indeed praiseworthy and a “stand alone effort” in this highly important field of policing for the future. This bank of trained and committed cybercrime investigators that he is churning out at the PRTS will stand MP Police in good stead in the times to come.

I wish him all the best and all success in the times to come.
